

ANYASI CHINEME

Cloud Engineer | DevOps Engineer

Lagos, Nigeria • +2348123813902 • Anyasiprecious5@gmail.com

linkedin.com/in/chinemeanyasi • github.com/cyberN3m3

PROFESSIONAL SUMMARY

Cloud Engineer focused on AWS infrastructure, Infrastructure as Code (Terraform), and CI/CD automation. Automated multi-environment provisioning to reduce deployment time by 60% and maintained 98% pipeline success across 15+ AWS environments. Seeking Cloud/DevOps Engineer role to scale secure, cost-efficient cloud platforms using serverless architecture, containerization, and multi-region resilience.

PROFESSIONAL CERTIFICATIONS

AWS Solutions Architect – Associate | AWS | November 2025 • **CompTIA Security+** | CompTIA | December 2024

AWS Cloud Practitioner | AWS | August 2025 • **Google Cybersecurity Certificate** | Google

CORE TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, VPC, S3, RDS, Lambda, Route 53, CloudFront, API Gateway, DynamoDB, CloudTrail, CloudWatch)

IaC & Automation: Terraform, Terraform Modules, GitHub Actions, CI/CD Pipelines, AWS CloudFormation, Infrastructure as Code

Languages & Scripting: Python, Bash/Shell, Python 3.11 (Lambda optimization)

Containerization & Orchestration: Docker, Container Optimization, Microservices Architecture

Security & Monitoring: IAM (Least-Privilege), Security Groups, NACLs, CloudWatch, CloudTrail, Vulnerability Assessment, Incident Response

Networking: VPC Design, Multi-Region Architecture, Subnets, Route Tables, NAT/Internet Gateways, Route 53 (Health Checks)

Version Control & Collaboration: Git, GitHub Actions, Infrastructure Versioning

PROFESSIONAL EXPERIENCE

Cloud Computing Trainee | ALX Cloud Computing Program (Remote)

Jun 2025 — Dec 2025

- Designed segmented VPC architectures (public/private subnets, NAT Gateways) to improve network isolation by 40% and eliminate unauthorized access — AWS (VPC, Subnets, Route Tables, Security Groups, NACLs).
- Automated multi-environment provisioning reducing setup time from hours to under 15 minutes using Python scripts and CI/CD integration — Technologies: Terraform modules, GitHub Actions, Python, AWS CloudFormation.
- Implemented least-privilege IAM policies and automated validation to reduce security misconfigurations by 60% across 15+ environments — Tools: IAM, CloudTrail, Bash validation scripts, AWS Config.

- Achieved 99.5% infrastructure uptime across development environments by implementing automated monitoring with CloudWatch and Docker containerized applications for incident response — Tools: CloudWatch, Docker, Python alerting scripts.

Cloud Computing Intern | Elevate Labs (Remote)

Sep 2025 — Nov 2025

- Automated infrastructure deployment reducing manual provisioning time by 60% through Python scripts configuring IAM roles, security groups, and VPC routing tables across 15+ AWS accounts — Technologies: Python (boto3), Terraform, Bash.
- Built CI/CD pipelines achieving 98% successful deployment rate by implementing automated security group validation and infrastructure testing — Tools: GitHub Actions, Bash scripts, AWS CloudFormation, Terraform.
- Reduced incident response time by 45% by creating Docker-ized monitoring containers with CloudWatch integration and documenting standardized runbooks — Technologies: Docker, CloudWatch, Python, Lambda.
- Identified and remediated 23 critical vulnerabilities across EC2 instances and S3 buckets, then eliminated 100% of overprivileged IAM policies through automated auditing — Tools: CloudTrail, IAM Access Analyzer, Python scripts.

Information Technology Intern | Media Monitoring Company (Nigeria)

Jan 2022 — Oct 2022

- Automated media data processing increasing client report output by 40% per week using Python scripts for multi-source data extraction — Technologies: Python, SQL, Bash automation workflows.
- Reduced report turnaround time from 48 to 24 hours achieving 99.2% data quality score through validation checks and infrastructure documentation — Tools: Python, Bash, PostgreSQL.

KEY TECHNICAL PROJECTS

Multi-Region Disaster Recovery System | <https://github.com/cyberN3m3/Global-Shield-Dashboard>

- Architected production-grade multi-region DR solution achieving sub-60 second automated failover with zero data loss across AWS us-east-1 and us-west-2 — Technologies: CloudFront Origin Groups, S3, Route 53 health checks, Terraform.
- Reduced DR operational costs by 95% (under \$1/month) while maintaining 99.9% availability through serverless architecture and AWS Free Tier optimization — Tools: Terraform modules, CloudFormation, CloudFront.

LinkSnap — Serverless URL Shortener | <https://github.com/cyberN3m3/URL-SHORTNER>

- Engineered high-performance serverless API achieving sub-50ms response times handling 100,000+ monthly requests with 99.9% availability — Technologies: AWS Lambda (Python 3.11), DynamoDB, API Gateway, CloudFront.
- Optimized infrastructure costs to under \$0.50/month through serverless-first design, NoSQL single-table optimization, and automated deployment pipelines — Tools: Terraform, Lambda, DynamoDB, CloudWatch.

Real-Time Security Monitoring System

- Deployed CloudTrail monitoring across 50+ AWS resources with automated S3 log storage, Bash-based alerting, and incident response runbooks — Technologies: CloudTrail, S3, Lambda, CloudWatch Events, Bash.

EDUCATION

Bachelor of Science in Computer Science

Federal University of Petroleum Resources Effurun / *Jan 2019 — May 2025*
