SUMMARY

AWS Certified Solutions Architect and CompTIA Security+ holder who builds secure, cost-aware AWS infrastructure with Terraform. Migrated a containerised app from a single server to ECS Fargate with zero data loss, a keyless CI/CD pipeline and tested disaster recovery, and runs five AWS projects with live demos on GitHub. Seeking a junior Cloud Engineer role, remote or hybrid.

CERTIFICATIONS

AWS Certified Solutions Architect – Associate (Nov 2025) · CompTIA Security+ (Dec 2024)
AWS Certified Cloud Practitioner (Aug 2025) · Google Cybersecurity Professional Certificate

SKILLS

Cloud (AWS): ECS Fargate, ECR, EC2, Auto Scaling, VPC, ALB, CloudFront, Route 53, S3, RDS (PostgreSQL), DynamoDB, Lambda, API Gateway, SQS, SNS, EventBridge, Cognito, Secrets Manager, IAM

Infrastructure as Code: Terraform (modules, remote state, terraform test), AWS CloudFormation

CI/CD & Automation: GitHub Actions, OIDC keyless deployment, Dependabot, Python (boto3), Bash

Containers: Docker, Docker Compose, Amazon ECS (Fargate, Fargate Spot), Amazon ECR

Security: IAM least privilege, AWS WAF, GuardDuty, CloudTrail, IAM Access Analyzer, Checkov, Prowler (CIS AWS Benchmark), Gitleaks, pip-audit, image scanning

Monitoring & Reliability: CloudWatch (alarms, dashboards, Logs Insights), SNS alerting, VPC Flow Logs, RDS point-in-time recovery, disaster recovery drills

Languages & Tools: Python (FastAPI, Celery, boto3), Bash, SQL (PostgreSQL), Linux command line, Git

PROJECTS

DocFlow: Single-Server to AWS Migration | Terraform, ECS Fargate, RDS, S3, SQS, CloudFront, AWS WAF, GitHub Actions | GitHub · *Oct 2026*

- Migrated a containerised FastAPI, Celery and PostgreSQL app from a single server to ECS Fargate with zero data loss and ~9 minutes of downtime, verified by automated counts.
- Provisioned 101 AWS resources in 7 Terraform modules with remote state and locking (private RDS, versioned S3, SQS with DLQ, CloudFront, WAF); full rebuild from code in ~15 minutes.
- Cut Checkov IaC findings from 51 to 0 (fixed or risk-accepted); added CloudTrail, GuardDuty, VPC flow logs and read-only containers; CI smoke tests confirm the WAF blocks attacks.
- Added 12 CloudWatch alarms with email alerts; DR drills restored the database in ~15 minutes with identical data, and a crashed task self-healed in ~30 seconds.

AWS Cost Optimization Scanner | Python, boto3, Lambda, EventBridge, SNS, API Gateway, Terraform | GitHub · Live demo · *Mar 2026*

- Built a serverless scanner that checks every enabled region weekly for idle EC2 (<5% CPU over 7 days), unattached EBS volumes, S3 buckets without lifecycle rules and RI savings.
- Scanned regions in parallel (ThreadPoolExecutor) so on-demand scans finish within the API Gateway timeout; results go to SNS email, Slack and a live dashboard.
- Found $45.60/year of waste on its first run (an idle t3.micro at 0.56% CPU); runs at $0/month with a read-only, least-privilege IAM role.

Zero-Trust Remote Workforce Platform | Terraform, VPC, EC2 Auto Scaling, ALB, RDS PostgreSQL, Cognito, Secrets Manager, React | GitHub · Live demo · *Mar 2026*

- Designed a 3-tier VPC across 2 AZs (public, private, database subnets) with least-privilege security groups between tiers, using 5 reusable Terraform modules.
- Kept credentials out of code with Secrets Manager and EC2 instance profiles, and added Cognito sign-in with TOTP multi-factor authentication.

- Cut running costs with one NAT Gateway shared by both private subnets instead of one per AZ (~$32/month saved) and a single ALB with path-based routing, on Free Tier EC2 and RDS.

Global Shield: Multi-Region Failover | Terraform, S3, CloudFront origin groups, Route 53 health checks | GitHub · Live demo · *Feb 2026*

- Built active-passive failover from us-east-1 to us-west-2 with CloudFront origin groups, monitored by Route 53 health checks on the primary region.
- Defined both regions in one Terraform configuration with provider aliases; the whole stack runs for under $1/month.

Also built: LinkSnap serverless URL shortener (Lambda, API Gateway, DynamoDB, CloudFront, Terraform)

EXPERIENCE

Cloud Computing Intern | Elevate Labs (Remote)
Sep 2025 – Nov 2025

- Automated configuration of IAM roles, security groups and VPC route tables with Python (boto3) and Terraform across multiple AWS accounts.
- Built GitHub Actions pipelines that validated security group rules and tested infrastructure before deployment.
- Audited EC2 and S3 for security issues and remediated over-privileged IAM policies using CloudTrail and IAM Access Analyzer.

Cloud Computing Trainee (part-time programme) | ALX (Remote)
Jun 2025 – Dec 2025

- Designed segmented VPCs with public and private subnets, security groups and NACLs isolating compute and data tiers.
- Automated multi-environment provisioning with Terraform modules and GitHub Actions.
- Wrote least-privilege IAM policies with validation scripts; set up CloudWatch monitoring, alerting and incident runbooks for Docker apps.

IT Intern | Media Monitoring Company, Nigeria
Jan 2022 – Oct 2022

- Automated multi-source media data extraction with Python and cut report turnaround from 48 to 24 hours through data validation checks and standard documentation (Python, Bash, PostgreSQL).

EDUCATION

BSc Computer Science | Federal University of Petroleum Resources, Effurun (FUPRE)
Jan 2019 – May 2025
